Water Sample Results for August 20st, 2018

Our usual samples of Sturgeon Bay water for recreational purposes results have definitely caught me off guard. After beautiful weather and all sites being quite active the days before plus the amount of brown Algae present at most sites, the numbers were exceptional! Remember though, a heavy rain or water fowl can alter the quality of the water substantially.

Readings under *100 e-coli per 100 ml of water* are considered safe for recreational purposes.

Sturgeon Bay, August 20th

Location	E-coli
Pine Street Beach	1
26 Old Cottage Lane	0
30 Forest Lane	0
286 Albin Road	0
52 Lawson Lane	0
Acorn Lane Beach	39
420 Robins Point Road	1

Several notes:

*Pine Street Beach cleaning Saturday 10am to help keep it attractive for swimming.

* **Should you ever notice** a Barge or other Water Vessel off-loading Sewage even into a waiting Sewage Services truck in any open water or public area instead of a registered receiving location (such as a Marina), immediately contact the **Spills Action Centre, at 1-800-266-6060**. Thank you, Bryan Anderson, for this info.

*Why was Acorn Lane reading so high compared to the others you ask? Check with the 30+ Geese that only shifted a little to the south for me to get a sample.
